Being the crucial components of living cells, ion channels are important targets of therapeutic agents. Historically, it has been challenging to develop drugs on this target class. A major issue with target based ion channel drug development is the identification of effective small chemical leads for medicinal chemistry optimization to the clinical candidate status. Thus enough attention has been paid to the study of structure and functions of ion channels and their potential inhibitors. The present book compiles important chapters authored by eminent workers in the field to cover important recent advances in the studies of the structure and functions of ion channels and their inhibitors, such as sodium ion, potassium ion, chloride ion, calcium ion channel inhibitors. The book may be of great use to the students and scientists working in the area of molecular biology, biochemistry, physiology, neurobiology, and medicinal chemistry.

Orphic gold tables are key documents for the knowledge of rites and beliefs of Orphics, an atypical group that configured a highly original creed and that influenced powerfully over other Greek writers and thinkers. The recent discovery of some tablets has forced a noteworthy modification of some points of view and a review of the different hypothesis proposed about them. The book presents a complete edition of the texts, their translation and some fundamental keys for their interpretation, in an attempt at updating our current knowledge on Orphic ideas about the soul and the Afterlife stated in those texts. The work is improved with an appendix of iconographic annotations in which some plastic representations in drawings are reproduced related to the universe of tablets, selected and commented on by Ricardo Olmos. This topical book contains the latest scientific and engineering developments in the field of tubular steel structures, as presented at the "11th International Symposium and IIW International Conference on Tubular Structures". The International Symposium on Tubular Structures (ISTS) has a long-standing reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research, developments and applications in this field. Various key and emerging subjects in the field of hollow structural sections are covered, such as: novel applications and case studies, static and fatigue behaviour of connections/joints, concrete-filled and composite tubular members, earthquake resistance, specification and code developments, material properties and structural reliability, impact resistance and brittle fracture, fire resistance, casting and fabrication innovations. Research and development issues presented in this book are applicable to buildings, bridges, offshore structures, entertainment rides, cranes, towers and various mechanical and agricultural equipment. This book is thus a pertinent reference source for architects, civil and

mechanical engineers, designers, steel fabricators and contractors, manufacturers of hollow sections or related construction products, trade associations involved with tubing, owners or developers of tubular structures, steel specification committees, academics and research students. The conference presentations herein include two keynote lectures (the International Institute of Welding Houdremont Lecture and the ISTS Kurobane Lecture), plus finalists in the CIDECT Student Papers Competition. The 11th International Symposium and IIW International Conference on Tubular Structures – ISTS11 – took place in Québec City, Canada from August 31 to September 2, 2006. This authorised English translation of Gaston Maspero's classic French work of Egyptology introduced the subject to an enthusiastic British public. The world's most successful Olympic sailor's only how-to book, revealing the secrets that won Sir Ben Ainslie his first gold medal. An invaluable guide as to how to perform at the top of the Laser class or, indeed, any single-handed sailing dinghy. Brimming with photos, this is a colourful and detailed account of how to dominate in your fleet. This is the 4th edition of by far the most extensive buyer's guide available for the classic BSA Gold Star, covering the complete range of production from the original 1938 Model M24 through post-WWII models ZB, BB, CB, DB and DBD. Written to make it easy for potential Gold Star buyers to refer to when inspecting one of these highly desirable machines for possible purchase, it includes specialized information and photographs necessary to avoid paying Gold Star prices for the similar-looking B32/B34 and Alloy Clipper "competition models," or purchasing dubious components such as renumbered engines and counterfeit RRT2 gearboxes. The information also will be invaluable for restorers as well as people generally interested in the history of these machines. One chapter is devoted to the 1957 Spitfire Scrambler, a little-known hybrid produced only that year consisting of a twin-cylinder 650 cc engine in Gold Star cycle parts, predating the Rocket Gold Star by five years. Eleven Tables of data contain information on the proper speedometers, tachometers, gearboxes, carburetors, etc., and cover all models, including Clubman, Catalina Scrambler, Road Racer, Dirt Tracker, and Competition 'All Sports'. Fifty-five pages of color advertisements and images from rare sales brochures and magazines contain information for all years of this machine, from a pre-production 1937 description of expected specifications, to a listing in a 1964 sales brochure issued a year after the last Gold Star was manufactured (not covered are the B25/B50 machines that were given the name in 1971-72). For the restorer, a very useful "reverse parts list" specially created for this book has part numbers sorted in numerical order, enabling part numbers to be quickly identified and associated with the corresponding figures in the BSA parts manual. If you think you ever might want to buy, restore, or rebuild a Gold Star, the information in this book can save you considerable time as well as keep you from making some very costly mistakes.

For over fifteen years, Fred Perry's Gold Digger has brought readers a wealth of incredible stories and memorable characters. It's also been packed full of some of the weirdest, wildest, and most wonderful technology ever to leap off a drawing board. Now the secrets and details of the fantastic array of gadgets, weaponry, vehicles, and robots are revealed -- from cutting-edge discoveries to technology predating the entire universe -- all told from the perspective of Gold Digger's foremost technology expert, Gina Diggers herself! From Beta-Tech's Phantom Rings, Hurt-bots, and Peebos, to Ace's many aircraft and the ships of the Dynasty and Gina's Gina-mobiles and the Laz-E-Boy of Doom, the Gold Digger Tech Manual collects 11 issues -- that's over 350 pages worth of technological twisters -- all at a price that even a freshman engineering major's budget can afford! Vicky Van is a nickname for Victoria Van Allen, an enigmatic woman of, apparently, higher society, who keeps her past secret but is open to make new friends and acquaintances. She organizes bridge parties in her saloon, which are attended by prominent people. Once, one of her guests is found murdered, and Vicky vanishes before the police are summoned. Yet, her neighbor, Chester Calhoun, believes Vicky is innocent. The investigation of the murder brings a lot of twists and an unexpected finale.
