Possessives in English Feb 26 2023 This book is about a single morpheme - the possessive morpheme - in English. Often realized as 's, it occurs in a variety of constructions (the man's hat, a friend of mine, without my saying so, a girls' school). What does the morpheme actually mean? What category does it belong to? What is its contribution to the meaning of the expression in which it occurs? And how can we account for the various restrictions on its use? Dr Taylor

proposes a unitary account of the morpheme, within the theoretical framework of Cognitive Grammar. In the earlier chapters he introduces and explains the conceptual apparatus of the theory, and in the later chapters he develops a coherent account of the full range of possessive constructions. A special feature of this book is that it also provides a wide-ranging critique of alternative, and especially Government and Binding accounts of possessive expression, highlighting the profound conceptual differences between the contrasting approaches as well as some of the points of convergence.

Mexican American English Mar 25 2020 Responding to the need for a comprehensive treatment of Mexican American English and its varied influences across multiple generations, this volume provides true insight into how language contact triggers language change, and illustrates previously under-recognised links to ethnolects of other migrant groups in different parts of the world. It demonstrates how the variety begins with Spanish interference features but evolves into a stable variety over time by filtering out some of the interference features and responding to forces such as exploitation of its speakers, education, and the need to develop solidarity. A large number of linguistic variables from multiple realms of language are analysed that provide a truly balanced picture of the divisions within the community across a range of linguistic levels such as syntax, phonology, prosody,

accent, dialect, and sociolinguistics.

Folk-taxonomies in Early English Jun 08 2021 A folk-taxonomy is a semantic field that represents the particular way in which a language imposes structure and order upon the myriad impressions of human experience and perception. Thus, for example, the experience of color in modern English is structured around an inventory of twelve "basic" color terms; but languages vary in the number of basic color terms used, from thirteen or fourteen terms to as few as two or three. Anthropological linguists have been interested in the comparative study of folk-taxonomies across contemporary languages, and in their studies they have sometimes proposed evolutionary models for the development and elaboration of these taxonomies. The evolutionary models have implications for historical linguistics, but there have been very few studies of the historical development of a folk-taxonomy within a language or within a language family. Folk-Taxonomies in Early English undertakes this task for English, and to some extent for the Germanic and Indo-European language families. The semantic fields studied are basic color terms, seasons of the year, geometric shapes, the five senses, the folk-psychology of mind and soul, and basic plant and animal life-forms. Anderson's emphasis is on folk-taxonomies in Old and Middle English, and also on the implications of semantic analysis for our reading of early English literary texts.
