Textbook of Physical Geology Apr 15 2022

Earth Materials Jun 05 2021 Minerals and rocks form the foundation of geologic studies. This new textbook has been written to address the needs of students at the increasing number of universities that have compressed separate mineralogy and petrology courses into a one- or two-semester Earth materials course. Key features of this book include: equal coverage of mineralogy, sedimentary petrology, igneous petrology and metamorphic petrology; copious field examples and regional relationships with graphics that illustrate the concepts discussed; numerous case studies to show the uses of earth materials as resources and their fundamental role in our lives and the global economy, and their relation to natural and human-induced hazards; the integration of earth materials into a cohesive process-based earth systems framework; two color throughout with 48 pages of four color. Readership: students taking an earth materials, or combined mineralogy and petrology course in an earth science degree program. It will also be useful for environmental scientists, engineering geologists, and physical geographers who need to learn about minerals, rocks, soil and water in a comprehensive framework. A companion website for this book is available at: www.wiley.com/go/hefferan/earthmaterials.

Indonesia, Malaysia & Singapore Handbook Mar 02 2021

THE ARCHITECT OF OUR UNIVERSE Dec 23 2022 There was only a space, which was cold, smooth, continuous, infinite, eternal, and without boundary and any visible matter and energy before creation of our early Universe. However, this space may not have been empty. It was, perhaps, the Dark Matter particle, which popped up from this space. And due to its intrinsic properties it converted itself into a Supersymmetrical Superparticle that generated Supergravity by the pressures of forces of moving particles and thus into an infinitesimally small, dense, primordial, non-transparent (opaque) plasma fireball. This particle first designed the fertile sites due to its own strong gravitational attractive field in which all galaxies, stars, and planets in different regions of the Universe, including our own Milky Way galaxy that contains our Solar System with the eight planets, including Earth, originated after the collapse of the normal particles. With passage of time, the great fertile sites were generated on the Earth by tectonics, in which sedimentary rocks containing petroleum deposits at depths overlain by great alluvial plains were generated for the evolution and development of living beings, including humans and practicing agriculture, establishing industries, constructing civil facilities, and a multitude of other things for the survival of humans.

The Making of India Feb 13 2022 This book presents in a concise format a simplified and coherent geological-dynamical history of the Indian subcontinent (including Sri Lanka, Bangladesh, Myanmar, Southern Tibet and Pakistan). Encompassing a broad array of information related to structure and tectonics, stratigraphy and palaeontology, sedimentation and palaeogeography, petrology and geochemistry, geomorphology and geophysics, it explores the geodynamic developments that took place from the beginning around 3.4 billion years ago to the last about 5,000 years before present. Presented in a distilled form, the observations and deductions of practitioners, this book is meant for teachers, researchers and students of geology, geophysics and geomorphology and practitioners of earth sciences. A comprehensive list of references to original works provides guidance for those seeking further details and who wish to examine selected problems in depth. The book is illustrated with a wealth of maps, cross sections and block diagrams — all simplified and redesigned.

Geography of India Through Maps: For IAS/PCS and Academic Examinations, 8/e Sep 08 2021 The experience during the study and teaching of geography inspired me to transmit information of any subject and its performance in the maps at one place. The book presents the themes of INDIAN GEOGRAPHY in four dimensions: first - Subject information, second - Concept of subject, third - Analytical aspect of subject, fourth - Presentation of subject in maps or diagrams. A total of more than 400 maps have been presented in the book which not only helps in understanding the subject but also making the book unique. The relevance of traditional and current context has also been taken into consideration in the choice of subjects in the book, and information has been collected from recognized and authentic sources to help to make it flawless.

The Commonwealth Yearbook 2005 Mar 22 2020 'The Commonwealth Yearbook 2005' is an essential guide to the 53 member countries of the Commonwealth and the many organizations that work to promote international cooperation among the governments, professions and cultures of nearly two billion people.

WHERE WHEN AND HOW ANCESTRAL (LUCA) TO ALL LIFE ORIGINATED Oct 21 2022 The book is all about the living beings. All living beings, including humans have originated and evolved from the Last Universal Common Ancestor: LUCA that was possible as a result of spontaneous step-by-step chemical origin in about 3.750 billion years ago from the elements consisting of life body, such as nitrogen bases (adenine, thymine, cytosine, guanine, and uracil, which are made up off the elements - C, H, O, N) and ribose sugar. This life originated in the sediments of the palaeo floodplains at the palaeo mouths of fresh water flows/rivers on the Hadean surface in the Archaean Eon. This was a global phenomenon. The life on the rocky planet like our Earth was possible because of existence of fresh water bodies over minerals, metals, and clay deposits, which rested on Hadean surface and active geological processes and active environments. The book also makes an attempt to explain as to how do the simple elements, like C, H, O, N, S, and P first change to simple chemistry - H₂O, NH₃ followed by CH₄ HCN, and monomers - monosaccharides, amino acids, glycerol's/fatty acids, nucleotides, and polymers - carbohydrates, proteins, lipids, and nucleic acids. There was not much development for about 3210 million years (from 3750 million years to 540 million years) and suddenly changed/jumped to complex life forms in about 541 million years ago. Here the life originated and evolved without head and heart from 3750 million years ago to 522 million years ago, i.e., for about 3228 million years. The head was originated and evolved in about 521million years ago. However, consciousness emerged along with bonding of carbon with hydrogen and other elements which were finally converted into nucleosides having nitrogenous base and ribose sugar. The gravity and gravitational force intertwined with electromagnetic force were the reason there were bonding of carbon and hydrogen and other elements to originate and evolve

LUCA, which stayed away from thermodynamic equilibrium.

UP PGT Geography Exam 2022 | UPSESSB Post Graduate Teacher | 1200+ Solved Questions [10 Full-length Mock Tests] Jul 26 2020 • Best Selling Book in English Edition for UP PGT Geography (Bhugol) Exam with objective-type questions as per the latest syllabus given by the (UPSESSB). • Compare your performance with other students using Smart Answer Sheets in EduGorilla's UP PGT Geography (Bhugol) Exam Practice Kit. • UP PGT Geography (Bhugol) Exam Preparation Kit comes with 10 Full-length Mock Tests with the best quality content. • Increase your chances of selection by 14X. • UP PGT Geography (Bhugol) Exam Prep Kit comes with well-structured and 100% detailed solutions for all the questions. • Clear exam with good grades using thoroughly Researched Content by experts.

Principles of Engineering Geology Mar 26 2023 'Engineering geology' is one of those terms that invite definition. The American Geological Institute, for example, has expanded the term to mean 'the application of the geological sciences to engineering practice for the purpose of assuring that the geological factors affecting the location, design, construction, operation and maintenance of engineering works are recognized and adequately provided for'. It has also been defined by W. R. Judd in the McGraw-Hill Encyclopaedia of Science and Technology as 'the application of education and experience in geology and other geosciences to solve geological problems posed by civil engineering structures'. Judd goes on to specify those branches of the geological or geo-sciences as surface (or surficial) geology, structural/fabric geology, geohydrology, geophysics, soil and rock mechanics. Soil mechanics is firmly included as a geological science in spite of the perhaps rather unfortunate trends over the years (now happily being reversed) towards purely mechanistic analyses which may well provide acceptable solutions for only the simplest geology. Many subjects evolve through their subject areas from an interdisciplinary background and it is just such instances that pose the greatest difficulties of definition. Since the form of educational development experienced by the practitioners of the subject ultimately bears quite strongly upon the corporate concept of the term 'engineering geology', it is useful briefly to consider that educational background.

Engineering Geology Oct 09 2021 Engineering Geology attempts to provide an understanding of relations between the geology of a building site and the engineering structure. It presents examples taken from real-life experience and practice to provide evidence for the significance of engineering geology in planning, design, construction, and maintenance of engineering structures. The book begins with an introduction of geological investigations, distinguishing between the reconnaissance investigation, the detailed investigation, and investigation during construction. It then explains the significance of geological maps and sections; the mechanical behavior of rocks; subsurface investigation for engineering construction; and geophysical methods. The remaining chapters discuss the physical and chemical weathering of rocks; slope movements; and geological investigations for buildings, roads and railways, tunnels, and hydraulic structures. This book is intended particularly for civil engineering students and students of engineering geology in the university faculties of natural sciences. It describes geological features so as to be comprehensible to Technical College students and to explain construction problems intelligibly for geology students. The book will also be of assistance to planners, civil engineers, and graduate engineering geologists.

Irrigation & Power Abstracts Dec 11 2021

A Textbook of Geology (general and Engineering) Apr 27 2023

The Upper Gangetic Flood-plain Aug 27 2020 Articles most contributed by the members of the National Atlas Organisation and based on the surveys carried out during 1971 to 1973.

The Columbia Gazetteer of the World: A to G Nov 10 2021 A geographical encyclopedia of world place names contains alphabetized entries with detailed statistics on location, name pronunciation, topography, history, and economic and cultural points of interest.

Large Rivers Jun 24 2020 An updated treatment of management and geomorphology of large rivers around the world The newly revised Second Edition of Large Rivers: Geomorphology and Management delivers a thoroughly updated exploration of the form and function of major rivers. The book brings together a set of papers on the large rivers of the world, offering readers an insightful examination of a demanding subject. The new Second Edition of the book includes fully updated and revised chapters, as well as two entirely new chapters on the Ayeyarwady and the Arctic rivers. This fascinating volume describes the environmental requirements for creating and maintaining a major river system, case studies on over a dozen large rivers from different continents in a variety of physical environments, and the measurement and management of large rivers. Unmatched in scope, Large Rivers sheds light on a subject lacking in comprehensive study. Readers will benefit from the inclusion of: A thorough introduction to the geology of large river systems, hydrology and discharge, transcontinental moving and storage of sediment, and the greatest floods and largest rivers An exploration of the classification, architecture, and evolution of large-river deltas Discussions of sedimentology and stratigraphy of large river deposits, including their recognition in the ancient record and the distinction from incised valley fills An examination of the effects of tectonism, climate change, and sea-level change on the form and behavior of the modern Amazon river and its floodplain Measurement and management of large rivers The effect of climatic change on large rivers Perfect for postgraduate students and researchers in fluvial geomorphology, hydrology, sedimentary geology, and river management, Large Rivers: Geomorphology and Management will also earn a place in the libraries of engineers and environmental consultants in the private and public sectors working on major rivers around the world.

A Geology for Engineers Apr 22 2020 No engineering structure can be built on the ground or within it without the influence of geology being experienced by the engineer. Yet geology is an ancillary subject to students of engineering and it is therefore essential that their training is supported by a concise, reliable and usable text on geology and its relationship to engineering. In this book all the fundamental aspects of geology are described and explained, but within the limits thought suitable for engineers. It describes the structure of the earth and the operation of its internal processes, together with the geological processes that shape the earth and produce its rocks and soils. It also details the commonly occurring types of rock and soil, and many types of geological structure and geological maps. Care has been taken to focus on the relationship between geology and geomechanics, so emphasis has been placed on the geological processes that bear directly upon the composition, structure and mechanics of soil and rocks, and on the movement of groundwater. The descriptions of geological processes and their products are used as the basis for explaining why it is important to investigate the ground, and to show how the investigations may be conducted at ground level and underground. Specific instruction is provided on the relationship between geology and many common activities undertaken when engineering in rock and soil.

Bihar General Knowledge 2023 Oct 29 2020 The Bihar state is a wonderful example of natural; cultural; political and intellectual prosperity as well as dense diversity of the geographical structure. The land of Bihar; full of glorious past and inspirational traditions; has the distinction of being the birthplace and workplace of great personalities. The presented book provides complete and comprehensive information about Bihar. Comprising 38 chapters; it not only analyzes the historical; geographical; political; social; cultural; and economic conditions of the state in detail; but it also presents limitless possibilities of future development. The logical and interesting presentation of the visible progress and change in Bihar presently; makes it unique. This book is completely useful and readable; not only from the point of view of the candidates; but also for the guidance of research students; teachers and readers. Major Highlights of Bihar General Knowledge • Freedom Movement and Separate Bihar Movement • Art and Culture • Major Personalities • Agriculture and Irrigation • Population and Domicile • Tourism and Disaster Management • Major Commissions • Local Self Governance • Economic Indices • Poverty and Unemployment • State Policies and Industrial Policies • Start-up Policy; 2017 • Information and Communication Technology Policy; 2011 • Bihar Advertisement Policy; 2016 • Bihar Right to Public Services Act; 2011 • Bihar Agricultural Land (Conversion for Non-Agriculture Purposes) Act; 2010 • Bihar Right to Public Grievance Redressal Act; 2015 • Bihar Prohibition and Excise Act; 2016 • Economic Survey 2020-21 and Bihar Budget 2021-22 • Effects of Partition • Demand of Special Status for the State • Economic Backwardness and Potential of Growth • Good Governance and Seven Resolutions • Bihar Foundation Day • Statistical Presentation

Proceedings of the Indian Science Congress Aug 07 2021

Mapping Coastal Aquaculture and Fisheries Structures by Satellite Imaging Radar Nov 22 2022 Inventory and monitoring of coastal aquaculture and fisheries structures provide important baseline data for decision-making in planning and development, including regulatory laws, environmental protection and revenue collection. Mapping these structures can be performed with good accuracy and at regular intervals by satellite remote sensing, which allows observation of vast areas, often of difficult accessibility, at a fraction of cost of traditional surveys. This study is based on interpretation of satellite imaging radar data and a detailed image analysis procedure is described. The report aims at the necessary technology transfer for and operational use of the approach indicated in other similar environments.
