Analyzing Neural Time Series Data May 20 2022 A comprehensive guide to the conceptual, mathematical, and implementational aspects of analyzing electrical brain signals, including data from MEG, EEG, and LFP recordings. This book offers a comprehensive guide to the theory and practice of analyzing electrical brain signals. It explains the conceptual,

mathematical, and implementational (via Matlab programming) aspects of time-, time-frequency- and synchronization-based analyses of magnetoencephalography (MEG), electroencephalography (EEG), and local field potential (LFP) recordings from humans and nonhuman animals. It is the only book on the topic that covers both the theoretical background and the implementation in language that can be understood by readers without extensive formal training in mathematics, including cognitive scientists, neuroscientists, and psychologists. Readers who go through the book chapter by chapter and implement the examples in Matlab will develop an understanding of why and how analyses are performed, how to interpret results, what the methodological issues are, and how to perform single-subject-level and group-level analyses. Researchers who are familiar with using automated programs to perform advanced analyses will learn what happens when they click the “analyze now” button. The book provides sample data and downloadable Matlab code. Each of the 38 chapters covers one analysis topic, and these topics progress from simple to advanced. Most chapters conclude with exercises that further develop the material covered in the chapter. Many of the methods presented (including convolution, the Fourier transform, and Euler's formula) are fundamental and form the groundwork for other advanced data analysis methods. Readers who master the methods in the book will be well prepared to learn other approaches.

Federal Income Taxation of Individuals Apr 26 2020 On the 25th anniversary of Jeffrey Kwall's groundbreaking *The Federal Income Taxation of Corporations, Partnerships, Limited Liability Companies, and Their Owners* (now in its 6th edition), Kwall has done it again with a brand-new take on personal income tax in *The Federal Income Taxation of Individuals: An Integrated Approach*. Part of Foundation Press's forward-looking *Doctrine and Practice Series*, Kwall's book offers a modern approach to income tax designed to resonate with the current generation of law students. The book fully integrates the Tax Cuts and Jobs Act of 2017 and, in addition to the traditional cases, contains a collection of contemporary cases with provocative fact patterns that will interest all students. In that light, the book was designed to accommodate students with different learning styles by providing explanatory text and notes, detailed examples and problems, and a myriad of text boxes offering insights, discussion questions, online references, points worth noting, and applications to the practice of law. A primary goal of the book is to expose students to practical tax problems and to heighten student awareness of quality of practice issues. This goal dovetails with the book's recurring theme that economic considerations always outweigh tax considerations. The book consists of 18 Chapters. After an Introduction (Chapter 1), Chapters 2-8 focus on Gross Income. Because tax law is a foreign subject to most law students, these early chapters explore gross income in the context of familiar economic relationships (e.g., a business owner and its employees, a donor and a donee, a lender and a borrower). Chapters 9 and 10 address Deductions. In addition to focusing on allowance provisions, these chapters integrate the consequential impact of classifying deductions as section 62 deductions, miscellaneous itemized deductions, and other itemized deductions. Chapters 11-14 are focused on Timing questions with emphasis on the tax law's treatment of time value of money issues. Chapters 15 and 16 address Tax Rates and include coverage of assignment of income issues, capital gains and losses, and dividends. Chapter 17 highlights the Alternative Minimum Tax and Chapter 18 introduces the taxation of corporations and partnerships to whet students' appetites for future tax courses. The book is ideally suited for a three-credit or four-credit

introductory income tax course.

Your Brain and Law School Jun 08 2021 Based on the latest research, this entertaining, practical guide offers law students a formula for success in school, on the bar exam, and as a practicing attorney. Mastering the law, either as a law student or in practice, becomes much easier if one has a working knowledge of the brain's basic habits. Before you can learn to think like a lawyer, you have to have some idea about how the brain thinks. The first part of this book translates the technical research, explaining learning strategies that work for the brain in law school specifically, and calling out other tactics that are useless (though often popular lures for the misinformed). This book is unique in explaining the science behind the advice and will save you from pursuing tempting shortcuts that will take you in the wrong direction. The second part explores the brain's decision-making processes and cognitive biases. These biases affect the ability to persuade, a necessary skill of the successful lawyer. The book talks about the art and science of framing, the seductive lure of the confirmation and egocentric biases, and the egocentricity of the availability bias. This book uses easily recognizable examples from both law and life to illustrate the potential of these biases to draw humans to mistaken judgments. Understanding these biases is critical to becoming a successful attorney and gaining proficiency in fashioning arguments that appeal to the sometimes quirky processing of the human brain. This book is part of the Context and Practice Series, edited by Michael Hunter Schwartz, Professor of Law and Dean of the McGeorge School of Law, University of the Pacific. Your Brain and Law School was a finalist in the Best Published Self-Help and Psychology category of the 2015 San Diego Book Awards
