Sewage Treatment Plants: Economic Evaluation of Innovative Technologies for Energy Efficiency aims to show how cost saving can be achieved in sewage treatment plants through implementation of novel, energy efficient technologies or modification of the conventional, energy demanding treatment facilities towards the concept of energy streamlining. The book brings together knowledge from Engineering, Economics, Utility Management and Practice and helps to provide a better understanding of the real economic value with methodologies and practices about innovative energy technologies and policies in sewage treatment plants. "The birth and flowering of canonical jurisprudence in the twelfth century is one of the most striking and fruitful developments of the age, marking an important turn in the history of the Church and in framing the essential elements of the rule of law in political and social life." "Raymond of Penyafort was an important participant in these developments. Born near Barcelona in 1175, he became a teacher of canon law at Bologna, the greatest centre of legal studies. He joined the newly founded Order of Preachers (Dominicans), and championed multilingual education of the friars for a more effective evangelization of Muslims and Jews. He became Master General of the Order in 1238, and died in*

1275. He was canonized in 1601 and has been declared the patron saint of canon lawyers." "Pope Gregory IX appointed Raymond to produce a comprehensive compilation of papal legal decisions. The result, the *Decretals of Gregory IX (1234)*, would remain normative in the Catholic Church until 1917. Raymond drew on it to compose his *Summa on Marriage*, a summary of learned reflection on the law of marriage, to aid his Dominican brothers in hearing confessions, where numerous problems touching on marriage would have been encountered. The definition of marriage and of its ends, stages and impediments, arrangements and consequences are the subject of the work. This translation of it offers students and scholars alike a comprehensive presentation of the medieval teaching on marriage - learned in content, practical in orientation."--BOOK JACKET. When used appropriately, building performance simulation has the potential to reduce the environmental impact of the built environment, to improve indoor quality and productivity, as well as to facilitate future innovation and technological progress in construction. Since publication of the first edition of *Building Performance Simulation for Design and Operation*, the discussion has shifted from a focus on software features to a new agenda, which centres on the effectiveness of building performance simulation in building life cycle processes. This new edition provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition, and from a single building to district level. It contains new chapters on building information modelling, occupant behaviour modelling, urban physics modelling, urban building energy modelling and renewable energy systems modelling. This new edition keeps the same chapter structure throughout including learning objectives, chapter summaries and assignments. Moreover, the book:

- Provides unique insights into the techniques of building performance modelling and simulation and their application to performance-based design and operation of buildings and the systems which service them.
- Provides readers with the essential concepts of computational support of performance-based design and operation.
- Provides examples of how to use building simulation techniques for practical design, management and operation, their limitations and future direction. It is primarily intended for building and systems designers and operators, and postgraduate architectural, environmental or mechanical engineering students.
