This book, first published in 1933, addresses the 'routine' in library work: administration, organization, book selection and classification and cataloguing, as well as the office work, room supervision, shelf tidying and registration of borrowers, among others. This work provides the fundamental information necessary for the development of weed management strategies for all the major US crops using concepts that can be applied worldwide. Weed management systems are provided for cotton, peanut, soybean, wheat, barley, oat, sorghum, rice, fruits, nut crops, and more. The dynamics involved in creating the best management approaches for specific types of crops are explained. Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience – such as healthcare professionals, aid workers, military personnel, travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike. Emerging Visions of the Aesthetic Process explores the processes underlying aesthetics and play from the perspectives of psychologists, philosophers, and semiologists. It reveals the different ways in which scholars think about the following questions: (1) What is the origin of the creative process? (2) How do biological, social, and cognitive processes shape the activities of artists and the responses of viewers? (3) How does literary activity draw on our experiences of everyday life and how is it tied to other kinds of media? (4) How does play affect the process of growth from childhood to adulthood? The contributors consider artistic, literary, and play activity from its most biological roots through individual cognitive and emotional processing to its expression at the social level. Emerging Visions of the Aesthetic Process offers a stimulating basis for the discussion of aesthetic processes and will serve as an integrative, comprehensive treatise on the topic for researchers and students. When the Germans invaded the Soviet Union in 1941 the Red Army had four times as many tanks as the Wehrmacht and their tanks were seemingly superior, yet the Wehrmacht won the border battles with extraordinary ease the Red Army's tank force was pushed aside and for the most part annihilated. How was this victory achieved, and were the Soviet tanks really as well designed as is often believed? These are the basic questions Boris Kavalerchik answers in this absorbing study of the tanks and the tank tactics of the two armies that confronted each other at the start of the war on the Eastern

Front. Drawing on technical and operational documents from Russian archives, many of which were classified until recently and are unknown to Western readers, he compares the strengths and weakness of the tanks and the different ways in which they were used by the opposing armies. His work will be essential reading for military historians who are interested in the development of armoured warfare and in this aspect of the struggle on the Eastern Front. Reprint of the original, first published in 1867. **Silviculture: Concepts and Applications** reflects a belief that all the tools of silviculture have a useful role in modern forestry. Through careful analysis and creative planning, foresters can address a wide array of commodity and nonmarket interests and opportunities while maintaining dynamic and resilient forests. A landowner's needs, circumstances, and site conditions guide a silviculturist's judgment and decision making in finding the best ways to integrate the biologic-ecologic, economic-financial, and managerial-administrative requirements at hand. The Third Edition of this influential text provides a foundational basis for rigorous discussion of techniques. The inclusion of numerous real-world examples and balanced coverage of past and current practices broadens the concept of silviculture and the ways that managers can use it to address both traditional and emerging interests in forests. A thorough discussion of new and proven interpretations increasingly directs the attention of foresters toward the role silviculture plays in creating, maintaining, rehabilitating, and restoring forests that can sustain an expanding variety of ecosystem services. Provides detailed assessments of law applicable to the most difficult problems encountered during modern armed conflicts and coalitions. Topics as diverse as the evolving spectrum of conflict, innovations in weaponry, automated and autonomous attack, the depersonalisation of warfare, detention operations, the influence of modern media and the application of human rights law to the conduct of hostilities are examined in this book to see to what extent existing legal norms are challenged. The book takes each topic in turn, explains relevant provisions of contemporary law and analyses exactly where the legal problem lies. The analysis then develops the theme, examining for example the implications of current rules as to deception operations for certain applications of cyber warfare. The text is written in an accessible style, and demonstrates the continuing relevance of established rules and the importance of compliance with them. Useful for academics, military, governments, ministries of defence, ministries of foreign affairs, libraries, diplomats, think tanks, policy units, NGOs, and all others with an interest in law of armed conflict issues such as journalists and students. This set, comprising out-of-print titles from The Library Association Series of Library Manuals and The Practical Library Handbooks, is a key guide to the early modernisation of librarianship. Systems set up then are still in use today, giving the books practical use today, as well as providing a valuable historical analysis of the discipline. **Extending Web Services Technologies** addresses the rapidly growing impact of Multi-Agent Systems on web services tools and techniques. In particular, the book addresses the potential for MAS techniques to impact the difficult challenges that must be tackled for web services technology to realize its promises. The area of web services offers the multi-agent community exciting research possibilities, including similarities in system architectures, powerful tools, and a focus on issues such as trust and reliability. Likewise, techniques developed in the multi-agent research community promise to have a strong impact on this fast growing technology. The contents contain contributions by leading international researchers and professionals from both the web services and Multi-Agent Systems community. Topics include semantic web services and associated standards, architectures integrating agents and services, transactions, authorization, and service composition.
