NATION The Growth of the National Economies of Japan and the Soviet Union

The current paradigm shift in the world economy is challenging the traditional competitiveness and growth theories with their few explanatory variables. This book offers a more holistic framework to synthesise the key findings of the various branches of competitiveness and growth research. The author illustrates this framework with a new long wave theory of socio-economic development. This theory emphasises the competitiveness and growth benefits of rapid structural adjustment in the rapidly changing technological environment. Based on thorough analysis the author argues that both markets and governments have become less efficient due to the current transformation of the world economy. His empirical data from 22 OECD countries in the 1980s and 1990s illustrates that efficiency and growth-oriented governments have significantly contributed to their countries' economic success. National Competitiveness and Economic Growth will furnish its readers with a better understanding of the interdependencies of many important but seemingly unrelated aspects of modern economies and societies, for example the dynamics of business and technology, and cultural and institutional change. It will appeal to economists, business professionals and policymakers with a special interest in the competitiveness and growth of firms and national economies as well as the long-term development of socio-economic systems. THE SHAPING OF AMERICAN HIGHER EDUCATION SECOND EDITION

When the first edition of *The Shaping of American Higher Education* was published it was lauded for its historical perspective and in-depth coverage of current events that provided an authoritative, comprehensive account of the history of higher education in the United States. As in the first edition, this book tracks trends and important issues in eight key areas: student access, faculty professionalization, curricular expansion, institutional growth, governance, finance, research, and outcomes. Thoroughly revised and updated, the volume is filled with critical new data; recent information from specialized sources on faculty, student admissions, and management practices; and an entirely new section that explores privatization, corporatization, and accountability from the mid-1990s to the present. This second edition also includes end-of-chapter questions for guidance, reflection, and study.

"Cohen and Kisker do the nation's colleges and universities a much needed service by authoring this volume. The highly regarded histories of American higher education have become badly dated. They ignore the last quarter century when American higher education was transformed. This volume provides comprehensive information on that era." — Art Levine, president, Woodrow Wilson National Fellowship Foundation, and author, *When Hope and Fear Collide: A Portrait of Today's College Student*

"The second edition of *The Shaping of American Higher Education* is a treasure trove of information and insight. Cohen and Kisker provide us with astute and straightforward analysis and commentary on our past, present, and likely future. This book is invaluable to those seeking to go to the heart of the issues and challenges

confronting higher education." — Judith S. Eaton, president, Council for Higher Education Accreditation "Arthur Cohen and his collaborator have now updated his superb history of American higher education. It remains masterful, authoritative, comprehensive, and incisive, and guarantees that this work will stand as the classic required resource for all who want to understand where higher education came from and where it is going. The new material gives a wise and nuanced perspective on the current crisis-driven transformations of the higher education industry." — John Lombardi, president, Louisiana State University System "The Shaping of American Higher Education is distinguished by its systematic approach, comprehensive coverage, and extensive treatment of the modern era, including the first years of the twenty-first century. In this second edition, Arthur Cohen and Carrie Kisker are especially adept at bringing historical perspective and a balanced viewpoint to controversial issues of the current era." — Roger L. Geiger, distinguished professor, The Pennsylvania State University, and author, Knowledge and Money Growth in a Time of Change: Global and Country Perspectives on a New Agenda is the first of a two-book research project that addresses new issues and challenges for economic growth arising from ongoing significant change in the world economy, focusing especially on technological transformation. The project is a collaboration between the Brookings Institution and the Korea Development Institute. Part I of the book looks at key elements of change from a global perspective. It analyzes how technological change, shifts in investment, and demographic transition are affecting potential economic growth globally and across major groups of economies. The contributors explore possible scenarios for the global economy as the digital revolution drives rapid technological change, including impacts on growth, jobs, income distribution, trade balances, and capital flows. Technology is changing the global configuration of comparative advantage and globalization increasingly has a digital dimension. The implications of these developments for the future of sectors such as manufacturing and for international trade are assessed. Part II of the book addresses new issues in the growth agenda from the perspective of an individual major economy: South Korea. The chapters in this section analyze how macroeconomic developments and technological change are influencing the behavior of households and firms in terms of their decisions to consume, save, and invest. Rising income and wealth inequalities are a major concern globally. Against this backdrop, trends in the labor income share and wage

inequalities in South Korea are analyzed in terms of the role played by technology, industrial concentration, shifts in labor demand and supply, and other factors. Throughout the book, the contributors, in their analysis of both global and Korea-specific trends and prospects, place emphasis on drawing implications for policy. OBSERVATIONS ON THE GROWTH OF THE MIND. Nothing is a more common subject of remark than the changed condition of the world. There is a more extensive intercourse of thought, and a more powerful action of mind upon mind, than formerly. The good and the wise of all nations are brought nearer together, and begin to exert a power, which, though yet feeble as infancy, is felt throughout the globe. Public opinion, that helm which directs the progress of events by which the world is guided to its ultimate destination, has received a new direction. The mind has attained an upward and onward look, and is shaking off the errors and prejudices of the past. The structure of the feudal ages, the ornament of the desert, has been exposed to the light of heaven; and continues to be gazed at for its ugliness, as it ceases to be admired for its antiquity. The world is deriving vigor, not from that which is gone by, but from that which is coming; not from the unhealthy moisture of the evening, but from the nameless influences of the morning. The loud call on the past to instruct us, as it falls on the rock of ages, comes

back in echo from the future. Both mankind, and the laws and principles by which they are governed, seem about to be redeemed from slavery. The moral and intellectual character of man has undergone, and is undergoing, a change; and as this is effected, it must change the aspect of all things, as when the position-point is altered from which a landscape is viewed. We appear to be approaching an age which will be the silent pause of merely physical force before the powers of the mind; the timid, subdued, awed condition of the brute, gazing on the erect and godlike form of man. These remarks with respect to the present era are believed to be... A systematic investigation of growth in nature and society, from tiny organisms to the trajectories of empires and civilizations. Growth has been both an unspoken and an explicit aim of our individual and collective striving. It governs the lives of microorganisms and galaxies; it shapes the capabilities of our extraordinarily large brains and the fortunes of our economies. Growth is manifested in annual increments of continental crust, a rising gross domestic product, a child's growth chart, the spread of cancerous cells. In this magisterial book, Vaclav Smil offers systematic investigation of growth in nature and society, from tiny organisms to the trajectories of empires and civilizations. Smil takes readers from bacterial invasions through animal metabolisms to megacities and the global economy. He begins with organisms whose mature sizes range from microscopic to enormous, looking at disease-causing microbes, the cultivation of staple crops, and human growth from infancy to adulthood. He examines the growth of energy conversions and man-made objects that enable economic activities—developments that have been essential to civilization. Finally, he looks at growth in complex systems, beginning with the growth of human populations and proceeding to the growth of cities. He considers the challenges of tracing the growth of empires and civilizations, explaining that we can chart the growth of organisms across individual and evolutionary time, but that the progress of societies and economies, not so linear, encompasses both decline and renewal. The trajectory of modern civilization, driven by competing imperatives of material growth and biospheric limits, Smil tells us, remains uncertain. How America's high standard of living came to be and why future growth is under threat In the century after the Civil War, an economic revolution improved the American standard of living in ways previously unimaginable. Electric lighting, indoor plumbing, motor vehicles, air travel, and television transformed households and workplaces. But has that era of unprecedented

growth come to an end? Weaving together a vivid narrative, historical anecdotes, and economic analysis, *The Rise and Fall of American Growth* challenges the view that economic growth will continue unabated, and demonstrates that the life-altering scale of innovations between 1870 and 1970 cannot be repeated. Robert Gordon contends that the nation's productivity growth will be further held back by the headwinds of rising inequality, stagnating education, an aging population, and the rising debt of college students and the federal government, and that we must find new solutions. A critical voice in the most pressing debates of our time, *The Rise and Fall of American Growth* is at once a tribute to a century of radical change and a harbinger of tougher times to come. ...[Bokinfo].

A rigorous, pathbreaking analysis demonstrating that a country's prosperity is directly related in the long run to the skills of its population. In this book Eric Hanushek and Ludger Woessmann make a simple, central claim, developed with rigorous theoretical and empirical support: knowledge is the key to a country's development. Of course, every country acknowledges the importance of developing human capital, but Hanushek and Woessmann argue that message has become distorted, with politicians and researchers concentrating not on valued skills but on proxies for them. The common focus is on school attainment, although time in school provides a very misleading picture of how skills enter into development. Hanushek and Woessmann contend that the cognitive skills of the population—which they term the “knowledge capital” of a nation—are essential to long-run prosperity. Hanushek and Woessmann subject their hypotheses about the relationship between cognitive skills (as consistently measured by international student assessments) and economic growth to a series of tests, including alternate specifications, different subsets of countries, and econometric analysis of causal interpretations. They find that their main results are remarkably robust, and equally applicable to developing and developed countries. They demonstrate, for example, that the “Latin American growth puzzle” and the “East Asian miracle” can be explained by these regions' knowledge capital. Turning to the policy implications of their argument, they call for an education system that develops effective accountability, promotes choice and competition, and provides direct rewards for good performance. The current economic theory of innovation mainly analyses the technology factor and its impact on economic growth. In today's world, growth in information technology and knowledge of new ideas has altered the business paradigm dramatically. Modern economies have undergone a dynamic shift from material manufacturing to a new information technology model with research and development (R&D) and human capital. Through information and communications technology efficient information usage has achieved substantial productivity gains through learning by doing and incremental innovations. The present volume discusses this new

paradigm in terms of both theory and industry applications, including Schumpeter in his innovation model and the emphasis on new innovations replacing the old. Growth of business networking and R&D consortium have dramatically helped the modern business to reduce their unit costs and improve efficiency. This volume presents some new models emphasizing knowledge sharing and R&D cooperation. Rapid growth in recent times in some south Asian countries have been cited as growth miracles are largely caused by knowledge spillover and learning by doing, and this volume also investigates the role of incremental innovations. With a strong focus and extension of the current theory of innovation and industry growth experiences of both the US and Asian countries, this book will be of interest to MBA and graduate students in economics, innovation management, and applied industrial economics. The members of the organising Committee and their colleagues have, for many years been investigating the evolution of the fascinating surface features which develop during sputtering erosion of solids. Such experimental, theoretical and computational studies have also been carried out in many international laboratories and, as well as much co~onality and agreement, substantial disagreements were unresolved. In view of the increasing importance of such processes in technological applications such as microlitho graphic etching for the patterning of solid state devices and in fusion technology it was felt opportune to hold a meeting in this area. Furthermore the use of energetic atomic and ion fluxes is also becoming of increasing importance in assisting or modifying the growth of thin films in a number of important industrial processes and it was therefore rational to combine the, study of both erosional and growth processes in a single meeting. These proceedings include 16

invited review and 15 oral or poster presented contributions to the NATO Advanced Study Institute on the "Erosion and Growth of Solids Stimulated by Atom and Ion Beams". The review contributions span the range from the fundamental concepts of ballistic sputtering, and how this influences surface morphology evolution, through processes involving entrapment of incident species to mechanisms involved in the use of chemically reactive ion species. Further reviews outline the influence of energetic irradiation upon surface growth by atomic deposition whilst others discuss technological applications of both areas of growth and erosion.
